Smarter Compliance Starts Here

BTP Compliance Manager bridges any ERP system to SAP Document Reporting & Compliance — making SAP DRC your universal e-invoicing and statutory reporting hub, for SAP and non-SAP alike.

Any ERP System

Real-time & Batch

Multi-jurisdiction

The Hidden Bottleneck in Compliance

Multi-ERP organisations face a common trap: compliance platforms built around a single rigid data model that can't ingest data from diverse source systems.

MANUAL FRICTION

Spreadsheet conversions and file handling create delays before any report is filed.

FORMAT CHAOS

Subsidiaries, legacy ERPs, and cloud platforms each export in proprietary formats.

CUSTOM BUILD PER SOURCE

Each new data source triggers a weeks-long integration project.

AUDIT RISK

No end-to-end lineage means transformation errors go undetected until rejected.

Why it matters

- Faster submission cycles
- Fewer post-submission corrections
- Multi-source consolidation
- Complete audit lineage
- SAP-native security

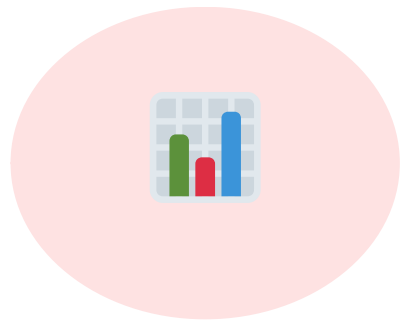

BTP Compliance Manager eliminates all of this

One platform — any format, any ERP — zero manual conversion, faster submissions.

Consume Any Format, From Anywhere

No pre-processing. No brittle middleware. Format detection and validation runs automatically.

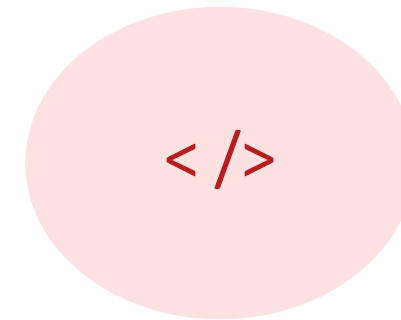

Excel

Multi-sheet workbooks, named ranges & formula-resolved values

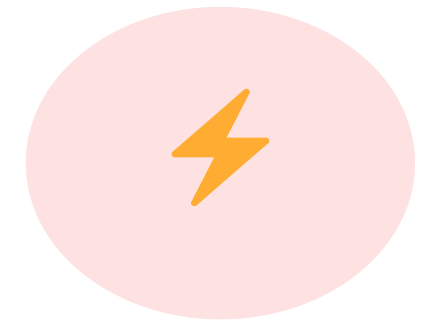

CSV

Delimited files from ERPs, bank feeds, or manual uploads

XML

Structured payloads with nested hierarchies & namespace parsing

Real-time

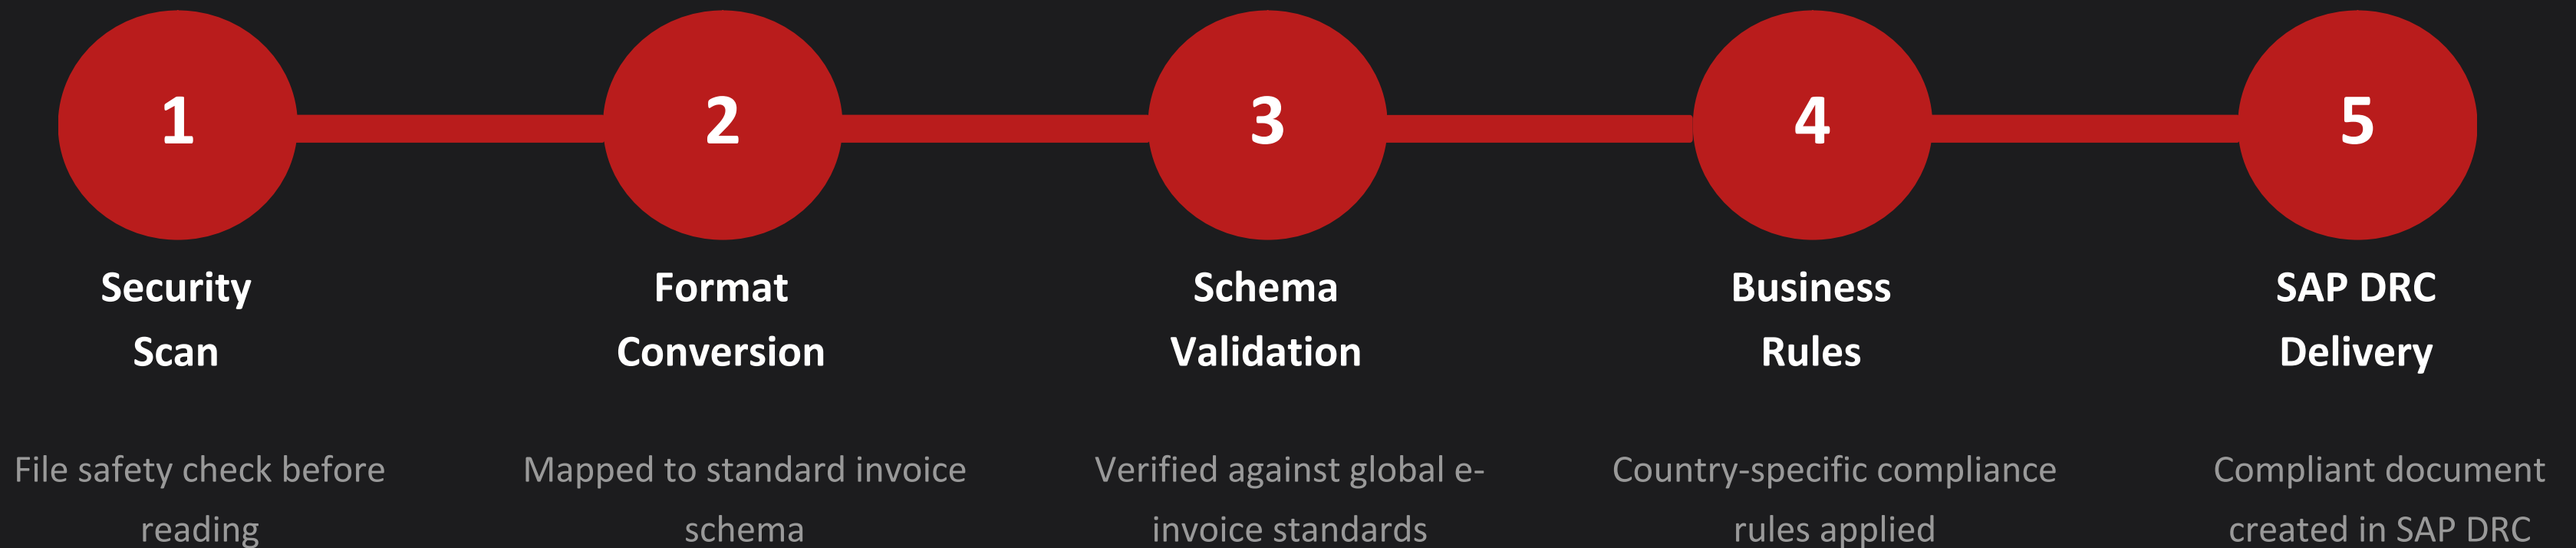

Live event streams via SAP Event Mesh & API connections

⚡ Event-driven at its core:

Native SAP Event Mesh integration means financial postings and tax-relevant events flow into your compliance pipeline the moment they occur — no overnight batch runs.

Five Hard Gates. Zero Exceptions.

Every document passes the same five verification stages before reaching SAP DRC. Fail any gate — the document stops, with a clear reason code for review.

What arrives in SAP DRC is always clean.

Security-screened · Format-converted · Schema-validated · Country-rule checked — every time.

Built for Enterprise Scale

One platform. Multiple countries, entities, source systems. No developer needed for regulation changes.

SOURCE CHANGES REQUIRED

- **Faster submission cycles**

Real-time and batch ingestion replace manual file handling, cutting preparation time significantly.

- **Multi-source flexibility**

Consolidate subsidiaries, legacy systems, and cloud platforms without a custom project per source.

- **Reduced manual intervention**

Automated mapping and validation catches errors before they reach SAP DRC — fewer corrections after submission.

- **Audit-ready by design**

Every transformation step is logged — complete lineage from source record to SAP DRC submission.

- **Rules without code**

Country compliance rules managed through admin interface. Regulation changes need no developer or deployment.

- **SAP-native and secure**

Built on BTP — inherits SAP's enterprise security, identity management, and governance controls.

Two Deployment Models. Your Choice.

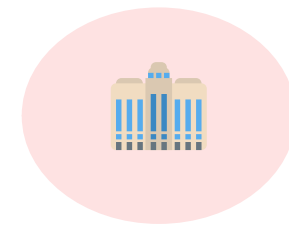

SaaS for speed. On-premise for data sovereignty. Both deliver the same compliance pipeline with full BTP security.

SaaS

Hosted on Crimson's BTP tenant

- No infrastructure setup required
- Up and running quickly
- Managed updates and maintenance
- Ideal for organisations wanting a turnkey solution

On-Premise

Deployed on your own BTP tenant

- Full data isolation within your environment
- Meets strict data residency requirements
- Configured to your security policies
- Ideal for large enterprises & regulated industries

Ready to unify your compliance pipeline across every ERP?

**One pipeline.
Every ERP.
Every country.
Every format.**

Stop converting data manually.
Start filing compliantly.
